Dear Engineering,

This in-house cathodic protection survey is intended to inspect, test, and make recommendations for improvements for cathodic protection systems. All testing was done by a certified Association for Materials Protection and Performance (AMPP) Cathodic Protection Technician (CP2) and under AMPP standard SP0169-2013 Control of External Corrosion on Underground or Submerged Metallic Piping Systems. All testing was done using a copper-copper sulfate reference electrode.

Concerns: No matter how high rectifier voltage was increased, it did not polarize the structure potential. A thorough investigation must be done to determine what structures this rectifier is protecting. All drawings available will need to be gathered. This location may need to be dug up and a new design will need to be done so all structures are protected. Close internal survey of pipe routes should be done.

Recommend: Speak with contractor who installed test points during water tower installation. Locations were not on as-built drawings and all test points could not be found. Most test points are not cathodically protected and more investigation must be done on how to protect these locations.

Survey Summary: The nine locations of rectifiers Earhart, Elysian Fields, Duels, DPS 5, Chickasaw, Sewer Station 23, Almonaster, General DeGaulle on Holiday and Mercedes need groundbed replacement. The seven locations Powerhouse gas line, Amid, Grant, Elaine, DPS 15, DPS 15 fuel tanks, DPS 19 fuel tanks need new anodes installed. The 42” Water Main along Earhart, 48” SFM along Galvez, and 36” Water Main along Elysian Fields, 30” Sewer, 50” & 36” Water Mains along Dwyer need close interval test to determine which parts of the pipe are protected and where new test points should be installed. All other locations that are not protected will need to be thoroughly investigated to determine the best move forward. Below is an estimated engineer’s cost for the locations mentioned in this summary.

Groundbeds	9 x $30,000	$270,000
Anodes along Intercoastal Way	4 x $40,000	$160,000
Close Interval Testing	$900/mi x 9mi	$8,100
Anodes on Fuel Tanks	$1,000/tank x 4 Tanks	$4,000
Total Cost		$442,100

SOURCES AND METHODOLOGY

Baseline Population:

The basin-level population counts are based on the 2010 Census and 2013, 2018, and 2023 American Community Survey (ACS) 5-year data. The data was collected in census block groups and intersected with basin geographies. The basin-specific model used the assumption that population is uniformly distributed within each census block group.

Population Forecast:

Population projections are based on an average of a lower growth limit and an upper growth limit. The lower limit is based on the rate of change of household size, number of households, and vacancy rate from 2013, 2018, and 2023 ACS 5-year data, while the upper limit is based on a linear curve fitted to the population of each drainage basin from 2010-2023. Both models made the following assumptions: population is uniformly distributed within each census block group and the proportion of city population in each basin will remain constant based on 2023 data. The final projection is an average between the high-growth and low-growth scenarios.
